

Astrium in Navigation

Astrium is a global space industry leader in all sectors of the space business. The company is a world leader in satellite navigation systems and has extensive experience in the design, development and manufacture of state-of-the-art systems and equipment.

Astrium, through its various entities, covers all relevant capabilities to support the successful implementation of the Galileo* system, its operations and services:

Astrium Satellites

- Giove-B experimental satellite prime
- IOV space segment prime, including navigation payload lead
- IOV ground control segment prime
- Navigation system engineering
- Ground mission segment involvement
- Navigation payload technologies
- Navigation solutions engineering
- Navigation applications

Astrium Space Transportation

- Satellite propulsion system
- Launch services

Ariane 5 is potentially the European launcher for Galileo* satellites which will ensure European autonomy for the launch of this highly strategic European asset

Astrium Services

- Development, delivery and operation of satellite services
- Provision of value added navigation services and augmentation services

All the space you need
